Hungry for more...

As previously announced, GET Signage has broadened our product offering, to include Digital Signage solutions.

Our initial foray into Digital Signage was through our long time and valued customer, The Beer Store. In a pilot project at the Stouffville Beer Store, the conventional "beer wall" has been replaced with four LCD screens that display all pricing for Premium, Imported and Discount beer brands, with a 5th screen highlighting all brands currently on sale.

Modifications were made to the current Price Ticket Ordering System (PTOS) to digitally display product and pricing information on flat panel screens.

As a result PTOS has now been expanded into a Digital Menu Board application.

PTOS contains an on-line database of all your products and locations.

Product records contain fields for:

- Manufacturer
- Description
- Product Category
- Sizes
- Price by size
- Price Effective Date
- SKU #
- Image Graphic (web-based jpg)

Location records contain fields for:

- Address
- # of Screens
- Products carried
- What products each screen displays

PTOS can be setup to highlight NEW and ON SALE items. Or, we can customize PTOS to highlight products to your specifications. PTOS can display your menu in either Portrait, or Landscape mode (see images above).

New products being offered? Prices changing? Product going on sale? No problem. Simply log on to PTOS and add or update the appropriate records. As effective dates come around, your screens will automatically display the new information.

It's as simple as that!
