

GET Signage

GET Signage Components Inc. makes sign design, procurement and management simple.

Leveraging the experience of our sister company, Signs of Change Inc., we have the people, software, processes and dedication to excellence to assist you in automating and simplifying your recurring signage requirements as new facilities are opened or existing locations are refitted or replenished.

Our software applications can help you manage your existing sign vendors or we can help you source the right vendors for your sign specific signage needs.

Our applications are secure, and give you complete visibility to your entire signage supply chain. We can inventory your existing signage inventory or we can have your signage needs built on demand. We can automatically create and distribute new price tickets to your locations as required or you can have them printed at store level by store staff.

inventory

STORE ORDERING SYSTEM (SOS)

Our Store Ordering System is a secure, web based sign Inventory Management & Procurement System, designed to effectively keep you in control of all the components of your signage program.

Once all of your signage needs are clearly defined, SOS can be configured to meet your store networks needs.

Centralized purchasing or store by store ordering, it's your choice.

Do you have existing signage vendors? No problem. SOS can deliver your orders to them electronically for fulfillment. Alternatively, GET Signage can, through our network of national vendors, source the best, most cost effective signage manufacturers and processes to meet your sign and budget requirements.

Once SOS is configured, reordering or rolling out new signage is as simple as logging in, building your order(s), confirming dates required and clicking on submit. From there, SOS distributes the order and issues the PO's to all required vendors, and the process begins right through to final delivery with built-in notifications all the way along.

And you can follow your order's progress, view order history, inventory levels and re-order quantities all on line in one spot.

manage your existing sign vendors,

budget

PRICE TICKET ORDERING SYSTEM (PTOS)

Our Price Ticket Ordering System is exactly what its name implies – a web based application to manage the accurate production and distribution of price tickets for your displays or shelves, in all of your locations, no matter what the format.

NEW: PTOS is now a **Digital Menu Board Application** as well! Instead of manual menu boards, and printed price tickets, we can deliver your pricing information direct to flat panel displays in your locations, with up to date products and prices.

- Have prices changing for certain items?
- Are you putting items on sale?
- Are items coming off of sale pricing?
- Have you added or discontinued products?

simplify

No problem with PTOS – simply login and update the PTOS database for the sku's in question and PTOS does the rest. PTOS knows which of your stores carry those products. PTOS knows each stores price ticket requirements. PTOS knows which vendors supply your price tickets. PTOS alternatively creates print orders and pdf files matching your price changes, and distributes them to your print subcontractors or delivers the pricing content direct to your locations for display on flat panel displays.

web based, secure applications
