

PTOS2

PRICE TICKET ORDERING SYSTEM (PTOS)

Our Price Ticket Ordering System is exactly what its name implies – a web based application to manage the accuracy, production and distribution of price tickets for your displays or shelves, in all of your locations, no matter what the format.

Do prices change for certain items frequently?

2005 - PTOS

In 2005 the GET Price Ticket Order System (PTOS) was designed for The Beer Store to streamline the process of making and tracking changes to in-store price tickets. What used to take a lot of time was reduced to minutes. The order was automatically submitted and using traditional Adobe Indesign files, processed itself through to store wide delivery in three days.

- Have prices changed for certain items?
- Are you putting items on sale?
- Are items coming off of sale pricing?
- Have you added or discontinued products?

No problem with PTOS – simply login, and update the PTOS database for the sku's in question. And PTOS does the rest. PTOS knows which of your stores carry those products. PTOS knows each stores price ticket requirements. PTOS knows supply details for each price ticket type. PTOS creates print orders and distributes them for production.

There is nothing more efficient or simple.

store wide fulfillment

Do you have multiple locations to manage?

accuracy

2010 - PTOS2

In 2010 we launched PTOS2 replacing the original Java based system with a faster, more easily customized and streamlined version in Ruby-on Rails. One of the biggest benefits of the rewrite is now PTOS2 puts all of the price changes directly into PDF forms, locks them and merges them into single-download files. This removed human error and has greatly reduced proofing time.

PTOS2 still allows users to enter and receive price changes on the web, and to have these price changes instantly submitted into the GET order processing system, where print orders/pdfs are automatically generated for print production. A Master Price List is also updated in real time as changes are submitted. The new prices are entered only once - PTOS does all of the rest of the work automatically over all of your different ticket types.

downloadable pdfs

Would you like to free up valuable time?

PTOS2 as a Digital Menu Board Application

Additionally, PTOS2 can also be used as a Content Manager for Digital Menu Board applications. Instead of manually changing products and pricing on a conventional menu board at each and every location for every price change or product add/delete, PTOS can deliver your current offerings and prices electronically to the flat panel displays in your locations.

a web based application
